

Accelerate Your **Growth. Scale** With Confidence.

Your Infrastructure
Shouldn't Hold
You Back

73%

of enterprises

hit a technology ceiling
before their business ceiling.

**The window to modernize is
narrower than you think.**

Global enterprises face a critical inflection point. While competitors ship AI features and capture market share, your engineering teams are managing infrastructure complexity. This doesn't have to be your story.

The Cost of Standing Still

Every day you spend managing infrastructure is a day your competitors spend building market share. Here's what the 'enterprise infrastructure tax' really looks like.

40% of your engineering capacity is consumed by infrastructure management instead of innovation that drives competitive advantage.

Your database sits idle for **18 hours** daily while you pay for peak capacity.

Infrastructure projects stretch to **3-6 months**, missing market windows.

The Critical Impact

When systems fail, you're losing **\$millions per hour** in direct revenue, not even counting brand and reputational damage.

“

Every dollar spent on idle infrastructure is stolen from innovation and growth.

Why Myridius?

We've been the strategic technology partner for enterprises from regional leaders to global Fortune 500 scale.

Fintech

Logistics

SaaS

We bring **enterprise patterns with startup velocity**, combining business strategy, technology execution, and AI innovation.

Through our EVOQ fabric and AWS partnership, we turn transformation from **quarters to weeks**.

The Modern Tech Stack

Enterprise-scale transformation requires four interconnected capabilities. These aren't nice-to-haves; they're the foundation of every organization that modernizes without disruption.

It starts with an **Elastic Foundation**, infrastructure that scales invisibly so you never think about servers. On top of that, we build an **Intelligence Layer** where AI drives revenue, not demos. We connect it all with **Data Velocity** to know what's happening while it's happening, protected by **Always-On Operations** because your first downtime shouldn't be in production.

Myridius EVOQ | Enterprise Velocity Without the Risk

Most consultancies tell you what to do. Most vendors tell you how to build it. We show you working prototypes in 2-3 weeks. Our **EVOQ AI Fabric** combines AI-powered development tools with pre-built components for the most common enterprise transformation challenges; from production GenAI agents to real-time data platforms.

>40%

3 Weeks vs 3 Months

What takes 3 months to build custom becomes 3 weeks with EVOQ. That's not a promise. It's a pattern we've proven across financial services, retail, logistics, healthcare, and enterprise SaaS.

Proven Patterns, Delivering Enterprise Outcomes

We bring a proven track-record of delivering transformation for complex, high-growth global organizations

Scale without breaking.

We helped a global entertainment platform move 48 apps to EKS, achieving **58% TCO Reduction** while handling 10x traffic surges.

Real-time decisions.

A theme park dining system now handles **1.5M Daily Searches** with sub-10ms latency, proving that speed drives conversion.

Never stop moving.

For a global enterprise supply chain running **24x7x365**, we built mission-critical resilience ensuring **Uptime** across millions of transactions globally.

See everything.

Complex enterprise workflows demand clarity. We delivered **a 360° Real-time View** for a global enterprise platform to streamline multi-region operations.

Predict demand.

Enterprise commerce demands precision planning. We implemented **AI Forecasting** to optimize inventory, reduce waste, and improve margin at scale.

Manage Risks.

Enterprise financial services demand speed and security. We built a system handling 4,000 TPS with **real-time fraud detection** and regulatory compliance built-in.

Your Path from Intent to Competitive Advantage

We've identified transformation areas where the right technical decisions create lasting competitive moats. Each addresses a specific challenge global enterprises face and each unlocks deeper AWS capabilities that scale with your business.

Differentiation & Data

Turn data into differentiation with **Bedrock** and **SageMaker**. Shift from batch to real-time with a Unified Data Foundation on **MSK** and **Kinesis**.

Scale & Efficiency

Build once, expand everywhere with a modular Platform for Growth using **EKS** and **Lambda**. Pay for growth, not idle capacity with Elastic Operations.

Enterprise Trust

Ensure enterprise deals don't stall with Production-Ready Security. Zero-trust architecture via **WAF** and **GuardDuty** keeps you compliant and ready.

The question isn't whether to transform. It's whether you can afford to wait.

How We Work Together

2-4 Weeks

Map & Understand

We map your challenges to solutions. Deep-dive technical review and roadmap prioritization.

6-12 Weeks

Prove It Works

Pilot on your highest-priority capability. Only when you've seen the value do we move forward.

Ongoing

Scale Success

Expand proven capabilities for sustained competitive advantage. Partnership, not vendor management.

Let's Start with an **Exploratory Conversation** 1 Hour
